Continuation Sheet (PTOL-303)

Application No. 09/723,868

Continuation of 5. does NOT place the application in condition for allowance because: the argument that the Examiner's conclusion of obviousness is based upon improper hindsight reasoning has not been found persuasive. It must be recognized that any judgement on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the invnetion was made (i.e. that clips and ropes are used in conjunction with each other for culling fish), and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. It is noted in the Applicant's response to the after-final amendment, it is stated that the applicant's claim include the limitation that the clip is "capable of exerting a force on the biasing member thereby increasing the gripping force". This limitation has not been claimed as the Applicant has asserted. Claim 1 states that the biasing member is used to "create a gripping force between the first and second proturesions....capable of holding a fish by a tip without punching a hole in the fish". It is further noted that it is the loop (of the length of rope) which is stated to be "capable" of exerting a force....thereby increasing the gripping force. This limitation holds true for any instance in which a rope is attached to a holding member due to the fact that as the rope is raised, the gravitation force acting in the direction opposite from the rope due to the weight of the item being clipped is increased and thereby the gripping force required to maintain the object within the clip increases.
